Old Saint Leonard Polling House

Architectural Survey File

This is the architectural survey file for this MIHP record. The survey file is organized reverse-chronological (that is, with the latest material on top). It contains all MIHP inventory forms, National Register nomination forms, determinations of eligibility (DOE) forms, and accompanying documentation such as photographs and maps.

Users should be aware that additional undigitized material about this property may be found in on-site architectural reports, copies of HABS/HAER or other documentation, drawings, and the “vertical files” at the MHT Library in Crownsville. The vertical files may include newspaper clippings, field notes, draft versions of forms and architectural reports, photographs, maps, and drawings. Researchers who need a thorough understanding of this property should plan to visit the MHT Library as part of their research project; look at the MHT web site (mht.maryland.gov) for details about how to make an appointment.

All material is property of the Maryland Historical Trust.

Last Updated: 10-29-2003

CAPSULE SUMMARY
CT-1282
Old St. Leonard Polling House
6310 St. Leonard Road
St. Leonard, Calvert County
Ca. 1910
Private

The Old St. Leonard Polling House, constructed circa 1910 to serve as the voting place for the town of St. Leonard, is an excellent and intact example of the polling house building type in Calvert County. During the late 19th and early 20th centuries, the polling house was a significant building type in Calvert County, serving both an essential democratic function for providing residents with a place to vote, and a significant social function in providing the opportunity for social interaction between widely dispersed county residents. Replaced in 1926 by a slightly larger facility, the Old St. Leonard Polling House was subsequently moved to the Parran property at 6310 St. Leonard Road in St. Leonard, Calvert County. Since being moved, the building has been primarily used as a storage shed and for a short time in the 1990s as a workshop.

Set directly on a wood sill with no foundation, the vernacular wood-frame building stands one story in height and is one bay square. It is clad in German siding and the side-gable roof is clad in square-butt wood shingles. The roof features wide eaves and exposed rafter tails. The interior of the modest one-room building measures eleven feet, four inches in width by nine feet, four inches in depth. The floor is covered with three-and-a-half-inch-wide wood boards and the walls and ceiling feature wallboard cladding. In addition to the polling house, the 104-acre property is enhanced by a circa 1900 Queen Anne-style house, a circa 1930 windmill, and several non-historic outbuildings. The non-historic outbuildings, all constructed in the last quarter of the 20th century, include a gazebo, a shed, a carport, a garage, and an in-ground swimming pool.

Prepare both a one paragraph summary and a comprehensive description of the resource and its various elements as it exists today.

The Old St. Leonard Polling House is located at 6310 St. Leonard Road in St. Leonard, Calvert County, Maryland. Constructed circa 1910, it was moved to its current location in 1927. Previously, it was located approximately one-and-a-half miles further north, southwest of the intersection of St. Leonard Road and Calvert Beach Road. It is now located on a large rural property, with sloping fields and mature trees. Set directly on a wood sill with no foundation, the vernacular wood-frame building stands one story in height and is one bay square. It is clad in German siding and the side-gable roof is clad in square-butt wood shingles. The roof features wide eaves and exposed rafter tails. The interior of the modest one-room building measures eleven feet, four inches in width by nine feet, four inches in depth. The floor is covered with three-and-a-half-inch-wide wood boards and the walls and ceiling feature wallboard cladding. In addition to the polling house, the 104-acre property is enhanced by a circa 1900 Queen Anne-style house, a circa 1930 windmill, and several non-historic outbuildings. The non-historic outbuildings, all constructed in the last quarter of the 20th century, include a gazebo, a shed, a carport, a garage, and an in-ground swimming pool.

EXTERIOR DESCRIPTION

The façade or northwest elevation of the polling house is one bay in width and features a central entry. The entry is comprised of a single-leaf, five-panel wood door set within a square-edged wood surround. The southwest elevation is pierced by a 6/6 window with a square-edged surround and a narrow wood sill. Identical to the façade is the southeast elevation, which also features a single-leaf, five-panel wood door set within a square-edged wood surround. Likewise, the northeast elevation is identical to the southwest elevation, with a 6/6 window with a square-edged surround and a narrow wood sill.

INTERIOR DESCRIPTION

The Old St. Leonard Polling House is a modest one-room building, measuring nine feet, four inches in depth by eleven feet, four inches in length. The floor is covered with three-and-a-half-inch-wide wood boards and the walls and ceiling feature wallboard cladding. Lining the walls of the polling house are built-in wood shelves. The two windows and two doors are framed by square-edged wood surrounds. Electricity was introduced to the building in the early 1990s.

SECONDARY BUILDINGS

The property is further enhanced by two historic resources and five non-historic resources. Most notable is the circa 1900 Queen Anne-style dwelling, the Tom Parran House (CT-50, that rises two-and-a-half stories in height. Set on a five-course American bond brick foundation, the dwelling is clad in German siding and features a projecting tower on the southeast elevation. The asphalt-shingled front-gable roof covers the house and three interior-end brick chimneys rise above the roofline. The dwelling features Queen Anne-style windows with some stained glass panes, a wrap-around front porch with turned posts, and decorative wood shingles and panels in the gable end. There is also a metal-frame windmill to the north of the dwelling that was erected circa 1930.

The non-contributing resources consist of a gazebo, a shed, a carport, a garage, and an in-ground swimming pool, all of which were constructed in the last quarter of the 20th century. The wood-frame gazebo features an octagonal footprint and lattice work on the side elevations. The prefabricated wood-frame shed is clad in vertically grooved plywood sheeting and features a single-leaf door and a side-gable roof of asphalt shingles. The wood-frame carport has a shed roof and two open elevations. The remaining two walls are clad in vertically grooved plywood sheets. Standing one story in height and one bay in width, it is set on a wood post foundation. The garage sits to the east of the polling house and main dwelling. Oversized to provide storage for

limousines, the garage features a concrete-block foundation, a flat roof, and vertical aluminum siding. The in-ground swimming pool is surrounded by a concrete deck.

The Old St. Leonard Polling House, constructed circa 1910 to serve as the voting place for the town of St. Leonard, is an excellent and intact example of the polling house building type in Calvert County. During the late 19th and early 20th centuries, the polling house was a significant building type in Calvert County, serving both an essential democratic function for providing residents with a place to vote, and a significant social function in providing the opportunity for social interaction between widely dispersed county residents. Replaced in 1926 by a slightly larger facility, the Old St. Leonard Polling House was subsequently moved to the Parran property at 6310 St. Leonard Road in St. Leonard, Calvert County. Since being moved, the building has been primarily used as a storage shed and for a short time in the 1990s as a workshop.

THE POLLING HOUSE IN CALVERT COUNTY

The polling house is a distinctive rural building type in Calvert County, of which there are few extant examples. Purchased and operated by the Calvert County Board of Commissioners, these unique buildings appear to have originated in the late 19th century and were used until World War II (1941-1945), after which voting began to be held in larger public buildings such as schoolhouses.(1) However, the St. Leonard Polling House (CT-158) was used until circa 1972. Often built by private individuals for the benefit of the county, polling houses were generally one-room, single-story frame structures with a gable roof and a small chimney for a heating stove. They had two doors so that voters could move efficiently through the building, with one door for entering and one door for exiting. Paper ballots were cast in wooden ballot boxes, and voting was presided over by Judges of the Election. A representative from both the Republican and Democratic party were frequently present to observe the election process and to protect the interest of their respective parties.(2) In Because of the utilitarian nature of the buildings, they were almost entirely without ornament on either the interior or the exterior.

Polling houses were built in villages and towns centrally located for voter convenience, although traveling to a polling house on voting day was often still an arduous trip for many who did not live close by. Polling houses located in smaller towns, such as Mutual, had no more than a trickle of voters throughout the day, while the polling houses for more populated areas like Prince Frederick would have lines, particularly after work.(3) Election day was often accompanied by a variety of social and commercial activity. According to one long-time Calvert County resident, oysters were sold to voters.(4) Agnes Jefferson, daughter of Hannah Johnson Gross and Lusby native, tells of her mother making fried chicken and crab cake sandwiches to sell at the polling houses to hungry voters on election day for a little extra cash.(5) Polling houses are known to have recently existed at St. Leonard, Mutual, and Owings, although at one time polling houses were located all over the county.

HISTORY OF THE OLD ST. LEONARD POLLING HOUSE

The Old St. Leonard Polling House was erected to serve the small crossroads community of St. Leonard in southern Calvert

Continuation Sheet

Number 8 Page 1

County. Constructed during the early years of the 20th century, the one-room polling house is typical of polling houses found throughout the county. Typically, Calvert County polling houses are one-room wood-frame buildings with two entries. The purpose of the two separate entries was so that the voters could enter through one door, cast their ballot, and leave through the other door, thus relieving congestion within the building. During the early years of the 20th century, paper ballots were cast and placed in a ballot box, which was located within the building. Interestingly, the Old St. Leonard Polling House differs somewhat from other polling houses in the county, with the two separate doors on opposite sides of the building. Both the 1926 St. Leonard Polling House, the Sunderland Polling House, and the Mutual Polling House feature the two entries on the same elevation.

In the early years of the 20th century, voting was often a full-day affair, with people traveling considerable distances to cast their votes. According to a member of the community who recalls voting at the St. Leonard Polling House, voters would "enter the little building, after being checked in as being registered, he then entered a frame stall like affair with a curtain to hide the voter, so his or her voting was more or less private. After voting he placed his ballot in a large box and departed with very little conversation as this was not supposed to go on inside."⁽⁶⁾ A limited time within the polling house was apparently a court-ordered mandate, according to a sign that once hung in the Sunderland Polling House, which read "Notice: The Judges of Election are empowered by law to enforce the limit of four [4] minutes allowed each person."⁽⁷⁾

Little is known about the origins of the Old St. Leonard Polling House, other than that it was replaced in 1926 by the St. Leonard Polling House. According to current owner Thomas Parran, Jr., the 1926 polling house was erected under his ancestor Thomas Parran's proposal and donated to the St. Leonard community. Thomas Parran was a member of the Maryland State Congress from 1911 to 1913. Upon the completion of the new polling house, the Old St. Leonard Polling House was donated to the Parran family and moved to their property, south of St. Leonard at 6310 St. Leonard Road.⁽⁸⁾ The Parran family is one of the older families in the community, having settled in Calvert County in 1706 at the head of St. Leonard's Creek.⁽⁹⁾
