Ijamsville Survey District

Architectural Survey File

This is the architectural survey file for this MIHP record. The survey file is organized reverse-chronological (that is, with the latest material on top). It contains all MIHP inventory forms, National Register nomination forms, determinations of eligibility (DOE) forms, and accompanying documentation such as photographs and maps.

Users should be aware that additional undigitized material about this property may be found in on-site architectural reports, copies of HABS/HAER or other documentation, drawings, and the “vertical files” at the MHT Library in Crownsville. The vertical files may include newspaper clippings, field notes, draft versions of forms and architectural reports, photographs, maps, and drawings. Researchers who need a thorough understanding of this property should plan to visit the MHT Library as part of their research project; look at the MHT web site (mht.maryland.gov) for details about how to make an appointment.

All material is property of the Maryland Historical Trust.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

The Ijamsville survey district comprises approximately 21 acres from the public right-of-way to the rear property lines and retains its historic linear plan along the east and west sides of Mussetter Road. The district extends northward from the intersection of Ijamsville Road, slightly south of the Baltimore and Ohio Railroad tracks to 4763 Mussetter Road. The Ijamsville survey district contains nineteen contributing resources, representing architectural styles popular during the nineteenth and twentieth centuries. The survey district includes dwellings, religious and educational institutions, and commercial buildings.

Construction dates range from the early nineteenth century to the early twentieth century, with the majority of the buildings constructed in the latter half of the nineteenth century. Wood-frame buildings dominate the survey district, with brick employed for the Ijamsville Methodist Episcopal Church (F-5-10) and the Ijamsville School (F-5-11). Buildings in the survey district range from vernacular log and/or frame construction (4709 Mussetter Road) to a frame Four Square (4754 Mussetter Road). The Queen Anne style popular during the Victorian era is represented in the ca. 1870 Reinhart house. The twenty contributing resources include:

- J.K.D. Williams Store – east of Mussetter Road
- Reinhart House, 4714 Mussetter Road

Evaluation

The Ijamsville survey district is locally significant as an historic district under National Register of Historic Places Criteria A and C. The period of significance is from ca. 1831 to 1930. The district is associated with important patterns of industrial growth in Frederick County from the early nineteenth century to the early twentieth century (Criterion A). The buildings located in the survey district embody the distinctive characteristics of the type, period, and method of construction of early nineteenth century to early twentieth century architecture in Frederick County (Criterion C). The Ijamsville survey district possesses the aspects of feeling, association, setting, and location to convey its integrity and historic context as a ca. 1831 to 1930 railroad industrial stop that evolved into a thriving rural village.

Named after the Ijams family, Ijamsville represents a nineteenth century rural, industrial village. The slate quarries, located west of Mussetter Road, and railroad provided the impetus for the development of the village. Slate quarries first operated near Ijamsville around ca. 1800. Plummer Ijams, Jr., arranged for the Baltimore and Ohio Railroad to pass north of his grist mill. The ca. 1831 arrival of the railroad and the slate quarries spurred the village's growth. Ijamsville grew during the nineteenth and twentieth centuries, with development peaking during the early twentieth century. In its heyday, at least three stores, a church, and a post office operated in Ijamsville. The village's growth declined when the slate quarries stopped operations in ca. 1892. Rail traffic declined in use by the early twentieth century, as automobile and truck use increased. By 1913, the quarries had switched to producing shale. The quarries eventually closed in 1937 and the railroad station closed in 1938.

Generally, the buildings are in the same condition as when the Maryland Inventory of Historic Properties form was completed in 1994 by Janet Davis and have undergone few changes since then. Each of the nineteen contributing buildings and structures are described in detail in the 1994 survey. Most of the outbuildings in the district are not visible from the public right-of-way and therefore, were not discussed in the 1994 survey. Currently, many of the buildings are clad in vinyl or aluminum siding. The J.K.D. Williams store has continued to deteriorate since the 1994 survey. The exterior walls were buckling, suggesting

structural damage, windows were missing, holes in the corrugated metal roof were noted, and the building was surrounded by overgrown vegetation. The Ijams Mill ruin was no longer present. Alterations that have occurred in the district include maintenance and repair (4747 Mussetter Road), and replacing of siding (4719 Mussetter Road).

Ca. 1831-1930

The village of Ijamsville developed from about 1831 at the site of the Ijams Mill and the Baltimore and Ohio Railroad crossing of the present Mussetter Road and extended northward along the road just east of the slate quarries established about 1800. The mill, the railroad, and the slate quarries were the economic props which gave the village its growth during the period up to the late 1920's. The peak was in the period about 1890 to 1900, although the mill burned in 1894 and was apparently not rebuilt. The B&O had a period of increased activity in the period from about 1901 to 1930. At its height, Ijamsville had at least three stores, a church, a schoolhouse, and a range of log and frame dwellings which reflected its growth from a railroad industrial stop to a thriving rural village. The principal surviving buildings are the ruins of the circa 1815-1825 Ijams Mill, the greatly deteriorated Williams Store, a brick structure of about the 1870's, the Reinhart House, a circa 1870 house with a Queen Anne-style corner turret, the 1890 M.E. Church, and the 1878 schoolhouse, now a day-care center. The latter period of Ijamsville's development is represented by a single Four Square house of about 1915. Ijamsville is a fair example of a 19th century industrial village which was economically linked to the nearby industrial activities and the railroad which served them until the 1920's.

CONTRIBUTING RESOURCE COUNT: 22

The survey district of Ijamsville encompasses approximately 13 acres along the east and west sides of Mussetter Road, northward from the intersection of Ijamsville Road just south of the Baltimore and Ohio Railroad tracks in the 19th century village of Ijamsville, Frederick County, Maryland. The village developed from about 1831 to 1930 north of the early 19th century Ijams Mill, now a ruined brick shell after burning in 1894, and just east of the slate quarries established in about 1800 and active until about 1937, in later years as a shale quarry. The present Mussetter Road was the only public road in the vicinity north of Bush Creek and the dwellings of the district, built from about 1830 to the first decade of the 20th century, are closely aligned along both sides. The district contains the 1890 brick Ijamsville Methodist Episcopal Church (F-5-10), still an active church, and the adjacent 1878 brick Ijamsville School (F-5-11), now a day-care center. Two contributing former commercial structures are within the boundaries, the Williams Store, a deteriorated brick building east of the mill ruin and Mussetter Road and south of the railroad tracks, and the Sellman and Williams store, now an apartment house, on the north side of the railroad. The remainder of the buildings are log and frame dwellings of two stories, with artificial siding on most and metal and composition roofs. Slate from the former quarries is found on only the schoolhouse, although many slate roofs were present during the 19th century. A few surviving small outbuildings, principally meathouses, sheds, and stables are present, the most notable being a frame stable west of the schoolhouse. The general condition of most buildings is good, although the Williams Log House at 4707 Mussetter Road was severely damaged by fire in early 1994. Dates of the buildings are based on architectural evidence, land records, historical maps, the 1882 and 1910 county histories, and Charles E. Moylan's town history and memoir, Ijamsville: The Story of a Country Village of Frederick County (1951).

Following are brief descriptions of the contributing structures in the survey district:

Ijams Mill ruins: The remaining brick walls are partially demolished and greatly overgrown, but the stone foundation is visible on the south elevation and the course of the mill race, which parallels the railroad tracks and runs south of the ruin is still discernible. Moylan's town history states that the original late 18th century Ijams Mill was located about one-half mile east of this structure. The date of the present building may be about 1815 to 1825, based on the agreement between Plummer Ijams and the B&O to grant a right of way through the area passing his mill and to name the station Ijams Mill. It would seem likely that the B&O would agree to locate its route at a well-established industrial site rather than the promise to build one next to the railroad stop. The brick walls of the upper structure, however, appear to have been rebuilt in about the mid 19th century, since the existing window openings on the south have segmental arches, a feature not usually found in the early 19th century. The south wall has four visible bays divided by brick pilasters. The mill was at least two stories in height and the southwestern corner still rises to a corbeled cornice fragment above the second story opening.

Prepare both a summary paragraph of significance and a general statement of history and support.

The Ijamsville Survey District is a fair example of a 19th century industrial village, retaining principally its linear plan along a single road which crossed the Baltimore and Ohio Railroad at the southern end of the survey district, near the ruins of the Ijams Mill and one of the several stores which operated in the village at its economic peak in the late 19th and early 20th century. The village was in existence in a limited form due to the presence of a slate quarry just to the west of the present Mussetter Road, and the original Ijams Mill, apparently a late 18th century building about a half mile east of the ruins of the last mill. As in Monrovia about three miles to the east, Ijamsville's most extensive development came about because of the railroad's arrival in 1831, an arrangement made by Plummer Ijams to pass directly north of his grist mill, the circa 1815-1825 successor to the original mill. From 1831 to the late 1920's, the village slowly grew and at its peak in the early 20th century had at least three stores, a post office, a church, a schoolhouse, and the steady economic base supplied by the slate quarries and railroad shipping activities. However, the mill burned in 1894 and was not rebuilt and, as the B&O's freight-hauling activity waned in the early 20th century, the small stations on the Bush Creek section and others began to decline in economic stability. By 1913, the slate quarries were producing shale instead of building slate. Increased use of trucks and automobiles in the 1920's further weakened the railroad's business and the Ijamsville station closed in 1938, one year after the quarries were closed. The remaining dwellings in the village reflect the long period of activity, from log structures to the eclectic frame buildings of the late 19th century represented by the Reinhart House, which has a Queen Anne-style corner turret and shingled gables and the Mulfinger House, with its unusual curved entry porch. The schoolhouse and the M.E. Church are typical structures for their time and rural location. The sole Four Square house in the survey district, built about 1915, represents the declining period of the village, when construction of new houses had passed its peak of activity.

7.1 Description (Continued)

The foundation is partially concealed, but brick arches and openings are in both the south and east sides of the stone base. The north and west walls are completely gone and the interior is a mass of rubble. The mill achieved a peak in its reputation under the ownership of Isaac McComas from about 1878 to 1892, but McComas' diary in the Historical Society of Frederick County during the late 19th century reveals the tenuous nature of milling as a livelihood in this period. McComas was foreclosed at Hood's Mill in Carroll County prior to coming to Ijamsville, where he had some good and several bad years. He converted the mill's operation to steam in the early 1880's, but by 1890, he was looking for work as a brickmason in Baltimore. He agreed to sell the mill to William Turner in 1894, but it was destroyed by fire prior to the finalization of the sale. It was apparently never rebuilt.

J. K. D. Williams Store: The two-story brick store building is located east of Mussetter Road across from the mill ruin. It is in only slightly better condition, having the same type of paneled brick walls with a corbeled cornice and segmental arched window openings. The corrugated metal gable roof is partially missing. The west gable end has an enlarged center entrance on the first story flanked by two narrow window openings. The surrounding brick appears to have been rebuilt, and the flat header arches over the openings are of mid 20th century construction. The visible remaining sash is 2/2. The interior reveals cast iron supporting columns on a severely deteriorated floor. The 1873 Atlas map and town plan of Ijamsville show a warehouse near this location which may be the existing building. Land records are obscure about the chain of ownership of this property, which was often linked with the mill in deeds. Anthony K. Williams and other Williams descendants owned the parcel along with property on the north side of the railroad tracks and Moylan identified the proprietor in the late 19th and early 20th century as J. K. D. Williams, who sold the store in 1916. The date of the store's closing is not yet determined.

Reinhart House, 4714 Mussetter Road: The two-story frame dwelling with a shingled corner turret dominates the view above the mill and store ruins and overlooks the railroad tracks. It was probably built about 1870, possibly without the turret, by Andrew Reinhart, then the owner of the mill. By 1875, Isaac McComas acquired the dwelling along with the mill and his diary speaks of working on the porch, a bracketed and dentiled veranda extending across the south elevation and the east gable end with a turned balustrade. The house had a slate roof until at least 1949 and the roof of the turret remains slate. The cross gable on the south and the end gables have shingled siding, while the remainder of the exterior is covered with asbestos shingle siding.

J. T. Williams House, 4703 Mussetter Road: The two-story frame building has been considerably altered, but the massing of the house reveals its 19th century origin. The exterior is covered with vinyl siding and a one-story porch is on the south elevation. The bay arrangement is irregular, reflecting the present use of the building as an apartment house. On the 1873 town plan, the building is identified as owned by J. T. Williams, one of the partners in the Sellman and Williams store (demolished) which stood to the west of the house near the road. The building's date is unclear because of its alterations, but at least part of the structure may date from about 1850-1860.

7.2 Description (Continued)

Mussetter Road: Identified as another Williams-owned house on the 1873 map, the two-story log dwelling was much damaged by two fires in early 1994. Its integrity level is greatly reduced, part of its original german siding is visible and the three-bay west elevation is discernible. The roof is composition material. The building probably dates from the 1830's and was built in the early years of the village's existence after the coming of the railroad.

4709 Mussetter Road: The two-story log and/or frame building has vinyl siding and a composition roof. The sash is 3/1 and the one-story porch has tapered square columns, indicating that these features were alterations to the mid-19th century original structure. An exterior stone and brick chimney on the north elevation is part of the original structure. This house may be the Conrad Hargett House mentioned in Moylan's town history as having been built with rails from the original railroad line and having originally been completely sided with slate, but it had been covered by asbestos shingles by 1951.

4711 Mussetter Road: This is a two-story frame building with three bays and vinyl siding. A one-story porch with turned columns and brackets crosses the west elevation. The roof is corrugated metal. The windows are 1/1 replacements and in the center bay of the second story is a Gothic arched window protected by a modern storm window. The present owner of the property, Mr. Ruch, believes the house was built about 1870-1875. An 1859 deed, however, refers to a frame dwelling on the 50x210-ft. lot and its scale and proportion and the Gothic arched window are consistent with a date of about 1850. Moylan gave its date as 1860, this being his summer home at the time of his town history, and the builder as William Jones. It is one of three houses shown on the 1858 map on the east side of the present Mussetter Road and the "Mrs. Jones" house on the 1873 map.

4715 Mussetter Road: The two-story frame house appears to have been built in the period 1830-1850. It has vinyl siding and 1/1 replacement sash and shutters. The roof is corrugated metal. A one-story porch covers the first story on the west elevation. An exterior stone and brick chimney is on the north elevation. An addition is on the south end of the original house.

4719 Mussetter Road: The house has been considerably altered, but retains its general form. Plywood siding covers much of the exterior and a projecting bay at the southwest corner retains some german siding, a paneled base, and 2/2 windows. Much of the rest of the structure has been rehabilitated, leaving little historical material visible on the exterior. It was probably built in the 1850's and may be the "J. Riggs" house shown on the 1873 town plan.

4728 Mussetter Road: This is a two-story frame house with a gable front on the east elevation and german siding. A one-story porch with Tuscan columns extends across the facade. The sash is 1/1 replacement and the roof is modern composition material. A shed addition is on the rear elevation. The house was built in the last quarter of the 19th century.

7.3 Description (Continued)
Frederick County

4725 Mussetter Road: The two-story house has a central cross gable, vinyl siding and a composition roof. The one-story porch has a turned frieze and brackets. The windows are 2/2. The house was built in the period 1875-1900.

4729 Mussetter Road: The two-story frame house has german siding and a composition roof. The three-bay facade has a one-story porch, 2/2 sash, louvred shutters on the second story, and a two-story rear wing. It was also built in the last quarter of the 19th century.

4733 Mussetter Road: The two-story dwelling has a central cross gable with asbestos shingle siding and a composition roof. A one-story porch with turned columns crosses the west elevation. The windows are 2/2. The date of construction is in the last quarter of the 19th century.

Ijamsville Methodist Episcopal Church (F-5-10): The 1890 brick church was built on the site of the original 1854 building. It has an exposed and plastered stone foundation on the south elevation in which are three bays, one containing a door to the church basement. The east elevation has a single centered entrance with a Gothic arched, stained glass transom. A small stone plaque with the dates of the original church and the current structure is above the door and below a circular opening with a louvred vent. The composition roof is crowned with a small open belfry. The three bays on the side elevations have Gothic arched stained glass windows. Modern concrete steps rise to the doorway from the road level.

Ijamsville School (F-5-11): The Ijamsville School was built in 1878 according to land records and the McComas diary. It is a two-room type with a central projecting foyer at the center of the east elevation. The stone foundation is plastered with concrete and the windows have 9/9 sash. The roof is slate and an open belfry stands on the roof of the projecting foyer. At the rear of the schoolhouse lot is a small frame stable with a corrugated metal roof and tongue-and-groove siding. A central gable with a 2/2 window lights the loft and functionally placed doors in the first level open to the stalls and the equipment and feed rooms. The building is now a storage structure and a shed addition is on the south gable end.

4747 Mussetter Road: The two-story house has three bays with asbestos shingle siding and a composition roof. The second story windows are 6/6 with louvred shutters, although the first story windows have been replaced. The eaves are decorated with a serpentine bargeboard. The one-story porch on the west elevation has turned columns, brackets, and a turned frieze. The house was built in the late 19th century.

4751 Mussetter Road: The house is a 1-1/2 story log or frame building with german siding and a one-story porch. The roof is corrugated metal. A center chimney is a strong suggestion of its original structure being log. The windows are 2/2. The house may date from the 1840's or 1850's, if log structure can be verified in the building.

7.4 Description (Continued)
Frederick County

4752 Mussetter Road: The two-story house has a gable facade with irregular bays on the east elevation. The gable peak has a decorative scroll-sawn ornament and the windows have molded lintels. The exterior is covered with german siding and the windows are 2/2. The roof appears to be slate on the north slope and metal on the south side. A one-story porch extends across the east elevation and the north elevation, ending in an enclosed section near the northwest corner. The porch columns are Tuscan order. The house was built in the period about 1880-1890.

4754 Mussetter Road: The only Four-Square house in the survey district, the house has vinyl siding on its exterior and a corrugated hipped roof with a small hipped dormer with paired single pane windows in the east elevation. An interior chimney rises at the south side of the roof. The windows are paired near the corners of the east and south elevations and the first story on the east has a sheltering porch on Tuscan columns. It appears to date from about 1915.

4763 Mussetter Road, Mulfinger House: The house was probably built by John P. Mulfinger about 1889 and has asbestos shingle siding and a corrugated metal roof. The three-bay west elevation has a center entry with an entry porch of unusual design. The roof is slightly arched with a narrow bracketed cornice. The two supporting columns are tapered to a wider base. The sash is 2/2 and an interior chimney is on the south gable end, with a replacement exterior chimney on the north.
