

Phase II and Phase III Archaeological Database and Inventory

Site Number: 18AG214

Site Name: North Branch

Prehistoric

Other name(s)

Historic

Unknown

Brief Description:

prehistoric short-term camp

Site Location and Environmental Data:

Maryland Archaeological Research Unit No. 22

SCS soil & sediment code

Latitude 39.5879

Longitude -78.7358

Physiographic province Ridge and Valley

Terrestrial site

Underwater site

Elevation 183 m

Site slope

Ethnobotany profile available

Maritime site

Site setting

-Site Setting restricted

-Lat/Long accurate to within 1 sq. mile, user may need to make slight adjustments in mapping to account for sites near state/county lines or streams

Topography

- Floodplain
- Hilltop/bluff
- Interior flat
- Upland flat
- Ridgetop
- Terrace
- Low terrace
- High terrace
- Rockshelter/cave
- Hillslope
- Unknown

Historic Brief
Description:

prehistoric short-term camp

Unknown **External Samples/Data:**

Collection curated at

 Additional raw data may be available online**Summary Description:**

The North Branch site (18AG214) is a small lithic scatter situated in a six acre field near a lock of the C & O Canal in the National Historic Park. It is situated along the Potomac River in Allegany County, on a high structural bench capped with Pleistocene-aged alluvial deposits of variable thickness. Underlying soils belong to the Allegheny fine sandy loam series. The site was first encountered (as a scatter of lithic flakes) during a 1979 archaeological assessment and reconnaissance survey of the North Branch area of the C & O Canal. Phase II testing was warranted in 1996 by the impending construction of a parking facility for the park.

Implementation of the Phase II work involved the excavation of 69 shovel tests across the site area on a 20-meter grid system, followed by additional shovel tests at 5 or 10 meter intervals around STPs containing cultural material. All shovel tests sampled the underlying B-horizon to varying depths with some STPs being deeper to sample complete sections of the underlying subsoil. Five 1 X 1 meter test units were opened up to examine apparent artifact concentrations in the eastern portion of the site area. All shovel tests and the five 1 X 1 m units were excavated according to natural stratigraphic horizons or ten cm subdivisions of natural horizons.

Total excavation recovered only 15 lithic flakes, 2 core fragments, and 1 fire cracked rock. No cultural features were encountered. Historic artifacts were limited to two fragments of terra cotta and an undecorated whiteware sherd. These materials likely relate to a lockhouse across the canal.

The site can only be classified as a short-term use lithic scatter based on the scant archaeological materials.
