Site Number: 18AN548

Site Name: Mehalko

Prehistoric

Other name(s)

Historic

Unknown

Brief Description:

Woodland shell midden/pit

## Site Location and Environmental Data:

Maryland Archaeological Research Unit No. 7

SCS soil & sediment code

Latitude 38.9384

Longitude -76.5478

Physiographic province Western Shore Coastal

Terrestrial site

Underwater site

Elevation 6 m

Site slope 0

Ethnobotany profile available

Maritime site

Site setting

-Site Setting restricted

-Lat/Long accurate to within 1 sq. mile, user may need to make slight adjustments in mapping to account for sites near state/county lines or streams

### Topography

- Floodplain
- Hilltop/bluff
- Interior flat
- Upland flat
- Ridgetop
- Terrace
- Low terrace
- High terrace
- Rockshelter/cave
- Hillslope
- Unknown
- Other
- Shoreline

### Ownership

- Private
- Federal
- State of MD
- Regional/county/city
- Unknown

### Nearest Surface Water

Name (if any) South River

#### Saltwater

Ocean

Estuary/tidal river

Tidewater/marsh

Spring

#### Freshwater

Stream/river

Swamp

## Summary Description:

Mehalko (18AN548) is an apparent Woodland-era shell pit on the South River in central Anne Arundel County, Maryland. The site is situated on a high bank overlooking the confluence of the river and Almshouse Creek. When the site was first archeologically documented in 1982, it was situated in the yard of the real estate sales office for a residential development. The soils at the site were Collington and Annapolis fine sandy loams.

The site was first identified in the early 1980s by MHT personnel during a preliminary investigation of a 52 acre tract known as the South River Landing development tract. The area was under examination because of the threat of impending development of the waterfront. Fortunately, the land developer was interested in the local archeology and generously agreed to voluntarily finance excavation work as needed following the discovery of 18AN548 and other sites on the tract. This resulted in a combined Phase II/III investigation program at several of the sites located on the tract in 1982. The 1982 work was carried out by students and faculty of the American University's Potomac River Archeology Survey (PRAS).

The Mehalko Site (18AN548) consisted of the remnant of a prehistoric pit, weathering out of the high bank above South River. The feature had been virtually destroyed by erosion, with the recoverable portion intrusive into the surrounding bank by only about 30.5 cm (12 inches). The remaining portion of the pit (about 91.44 X 30.5 cm) was fully excavated. Observable pit fill was of dense oyster shell, originally deposited horizontally and subsequently pitched downward as portions of the pit fell away. While no artifacts were recovered from the pit fill, a trench opened up to the west of the feature produced several quartz flakes (estimated at 15 pieces), 1 high-grade jasper flake, and some minute non-diagnostic ceramic sherds (at least 2). The trench was excavated to sterile subsoil. While diagnostics were not recovered from the Mehalko site, the manifestation is assignable to the Woodland period based on the presence of pottery.

Based on the 1982 research, 18AN548 appears to be a Woodland period shell-filled pit or part of a larger (now eroded) midden. An insufficient amount of prehistoric data was preserved at the site and, thus, interpretation is rather limited. Based on these findings, the site was determined to be incapable of addressing significant research questions related to Maryland prehistory. The housing development proceeded and the site was likely significantly impacted.
