

Phase II and Phase III Archaeological Database and Inventory

Site Number: 18AN662

Site Name: Green Spring #16/17

Prehistoric

Other name(s)

Historic

Unknown

Brief Description:

prehistoric lithic scatter

Site Location and Environmental Data:

Maryland Archaeological Research Unit No. 7

SCS soil & sediment code

Latitude 39.1277

Longitude -76.4788

Physiographic province Western Shore Coastal

Terrestrial site

Underwater site

Elevation 12 m

Site slope 0

Ethnobotany profile available

Maritime site

Site setting

-Site Setting restricted

-Lat/Long accurate to within 1 sq. mile, user may need to make slight adjustments in mapping to account for sites near state/county lines or streams

Topography

- Floodplain
- Hilltop/bluff
- Interior flat
- Upland flat
- Ridgetop
- Terrace
- Low terrace
- High terrace
- Rockshelter/cave
- Hillslope
- Unknown
- Other

Ownership

- Private
- Federal
- State of MD
- Regional/county/city
- Unknown

Nearest Surface Water

Name (if any) Tributary of Main Creek

- | Saltwater | | Freshwater | |
|--|--|--|--------------------------------|
| Ocean <input type="checkbox"/> | Estuary/tidal river <input type="checkbox"/> | Stream/river <input checked="" type="checkbox"/> | Swamp <input type="checkbox"/> |
| Tidewater/marsh <input type="checkbox"/> | Lake or pond <input type="checkbox"/> | Spring <input type="checkbox"/> | |

Minimum distance to water is 30 m

Temporal & Ethnic Contextual Data:

Summary Description:

Site 18AN662, or the Green Spring #16/17 Site, is a lithic scatter of unknown prehistoric affiliation near Pasadena in Anne Arundel County, Maryland. The site is situated on interior land with a gentle to moderate slope to the south towards a tributary stream to Main Creek. When the site was first identified in the 1980s, erosion was evident on the slopes and paths that criss-cross the area. Some lumbering has occurred and an old farm road runs to the north of the site and a small stream bi-sected the site into Areas 16 (to the west) and 17 (to the east). Soils in the area are primarily of the Evesboro-Rumford-Sassafras association with some Muirkirk loamy sand also occurring in some pockets.

The site was examined during a Combined Phase I, and II -level research project in 1988 for the Green Spring development project. The project area entailed a large parcel in northern Anne Arundel County planned for subdivision and housing development. The work was completed to fulfill mitigation requirements mandated by legislation of the Anne Arundel County Planning and Zoning Division.

Phase I fieldwork at Green Spring was divided into two methods, conducted concurrently, according to the amount of visibility and site potential in the particular area. Anywhere exposed areas existed (road cuts, erosional cuts, rodent burrows, and tree falls), the surface area was carefully examined. In addition, shovel test pits (STPs), 40-50 cm in diameter at the surface, were excavated to sterile subsoil in the areas of highest site potential and in one area of 0% visibility and moderate to low site potential. All excavated soils were passed through hardware cloth and recorded on standardized forms, and each STP was drawn to scale in profile. A total of 85 Phase I STPs were completed throughout the entire Green Spring project area, two of which led to the identification of 18AN662. Three quartz flakes were recovered. Based on these findings, the project proceeded directly to a Phase II-level of research.

Phase II work entailed the establishment of a grid off of the isolated surface find. The systematic grid, with 7.62 m (25 ft) intervals, was then extended in all four directions using a compass off of magnetic north. Shovel test pits were then excavated using the same methods employed during Phase I, but were situated systematically every 7.62 m. A total of 11 STPs were excavated during Phase II work. It should be noted that no formal test units (such as 1 X 1s) were excavated at 18AN662 during Phase II work.

Close interval shovel testing at 18AN662 yielded a quartz core, 1 quartz flake, and a piece of quartz shatter. The artifacts were recovered from between 15 and 75 cm below the ground surface, within multiple strata. No diagnostics were recovered and no features were encountered.

Archeological site 18AN662 is a prehistoric lithic scatter of unknown age. Based on the lack of diagnostics, lack of features, and relative dearth of artifact, the site does not appear to have any significant research potential.
