Summary Description:

The Route 26, #1 Site (18BA162) is an Early to Middle Woodland period temporary hunting site or camp site. It is situated on a high bluff overlooking a small intermittent stream feeding Liberty Reservoir in Baltimore County. Liberty Reservoir is an artificial lake created by the damming of the Patapsco River. The gently rolling topography has at least three definable terraces. Locust Run is situated roughly 1 km to the north which also flows into Liberty Reservoir. Bedrock at the site is primarily schist.

Archeological survey was undertaken in 1977 ahead the proposed expansion of Maryland Route 26 from Freedom Road to Offutt Road. The study area consisted of a stretch of existing Route 26 that was 14.48 km (9 mi) long with a right-of-way of 45.72 m (150 ft) on either side of the road. Site 18BA162 was identified during the survey. Lithic material was collected only from the surface in an area measuring about 30.48 m² in a cultivated field. A total of 21 prehistoric artifacts were retained including 14 pieces of debitage (12 quartz, 1 rhyolite, 1 chalcedony), 4 quartz biface fragments, 1 Selby Bay rhyolite point dating to the Middle Woodland period, 1 quartz Calvert point dating to the Early/Middle Woodland period, and 1 fragment of a quartz side-notched point. Construction on the north side of Route 26 was to impact the site. Therefore, Phase II archeological testing was recommended in order to acquire data on site function and prehistoric settlement patterns as well as supplementing the archeological record of this area of Baltimore County.

Phase II fieldwork was conducted at Site 18BA162 in April 1979. The project area was divided into 4 topographic zones: slope to modern floodplain, lower terrace, mid-terrace, and high terrace. The site was subjected to a systematic walkover and gridding into 15.24 m² (50x50 ft) units. Subsurface investigations consisted of the excavation of six 1.524 m² (5x5 ft) test units and two 0.609 m² (2x2 ft) test units. No units were placed on the floodplain; 3 units were placed in the lower terrace; 1 unit was placed on the small mid-terrace; and 4 units were placed on the high terrace. All excavated soils were screened through 0.95 cm (3/8 in) mesh.

Results of the Phase II testing at Site 18BA162 were limited. A single quartz biface was recovered from the surface survey. A total of 10 artifacts were recovered from plowzone contexts in the test units. This included 1 quartz biface, 2 pieces of quartz debitage, 1 black chert flake, and 6 "recent" ceramic sherds. Presumably the sherds were related to historic activity in the site area; they are recorded as "pottery" in the table above. No features were encountered.

The Route 26, #1 Site (18BA162) represents a temporary hunting site or camp site dated to the Early to Middle Woodland period based on the finds of two diagnostic projectile points. The variety of local along with non-local lithic materials collected from the site suggested that at least some of the materials were brought to the site by traveling groups. It is doubtful that further excavations would produce significant data on prehistoric activity at the site. No further work is recommended at 18BA162 and it was deemed not eligible for listing on the Nation Register of Historic Places.
