Summary Description:

The Perry Point I-10 Site (18CE261) is comprised of a Late Archaic period short-term base camp and a late 18th to early 20th century historic artifact scatter. The site is located in the southern portion of the Veterans Administration Medical Center at Perry Point in Cecil County, Maryland. It overlooks the Susquehanna River and the Chesapeake Bay. The site is situated on landscaped lots surrounding medical buildings on a small point of land that extends for about 200 m parallel to the shoreline and inland for 40-50 m. There is past and recent disturbance from construction of utility trenches, asphalt roads, parking lots, walkways, and large ventilator shafts.

Phase I and Phase II archeological testing was conducted on the 478 acre property of the Veterans Administration Medical Center (VAMC), which is located on the Perry Point Peninsula. The VAMC property includes developed and undeveloped areas, a historic district, and 104.5 wooded acres excessed to the General Services Administration (GSA). The project was undertaken to assist in compliance with the National Historic Preservation Act of 1966, as amended, and its implementing regulations, 36 CFR 800. Specifically, the Act requires that each federal agency establish a program to locate, inventory, and nominate to the National Register of Historic Places (NRHP) all properties under its ownership or control. Additionally, Section 110 requires that the significant values of cultural resources be preserved or enhanced when they are transferred. This applies to the land excessed to the GSA who was going to deed the 104.5 acre parcel to the town of Perryville for recreational use. The goals identified for the Phase I/II project were to locate and identify all cultural resources within the project area and to determine their eligibility for the NRHP, to assess the probable effects of any future undertakings at the VAMC or the excessed property on those resources, and to prepare plans and their estimated cost to mitigate those effects likely to be adverse. Prehistoric research themes that guided the archeological investigations included settlement patterns, trade networks, and resource exploitation. Historic research focused on structure locations, the exploitation of bay versus interior resources, and yard activity areas.

In the spring of 1987, the Phase I archeological survey identified 17 sites, 10 isolated prehistoric artifact locations, 12 isolated historic artifact locations, and 2 isolated prehistoric/historic artifact locations within the project area. Field investigations included a pedestrian survey of exposed shoreline and banks and shovel test pit (STP) excavations. No testing was undertaken in areas too disturbed by development to contain intact sites or too swampy to contain evidence of previous occupation. Intensive survey units were defined as those with a high probability of containing archeological remains. Those areas were shovel tested at 30 m intervals along transects set 30 m apart. Light survey units, those with a moderate to low probability of containing archeological remains, were shovel tested at 60 m intervals. Shovel tests around the grounds of the manor house were placed at 15 m intervals along parallel transects placed 30 m apart. Radial STPs were excavated at 7.5, 15, or 30 m intervals depending on the intensity designated for a particular unit (eg. intensive survey or light survey area). Based on the Phase I fieldwork, 9 sites were recommended for further Phase II work.

In the summer and fall of 1987, Phase II archeological testing was undertaken. Phase II testing consisted of additional STPs excavated at 10 m intervals along transects placed 10 m apart, and the excavation of 1 m² test units, although larger test units were dug when conditions warranted. A grid was established over the sites that were identified for further investigation as a result of the Phase I testing. All excavated soils were screened through ¼" mesh and all pre-20th century materials were retained. Flotation samples (1 liter) were collected per level from one test unit at each site. In addition to fieldwork, archival research was also conducted as part of the Phase II investigations.

Prehistoric occupation of Perry Point began at least as early as the Late Archaic period. Historic occupation on the peninsula began ca. 1659 when a merchant and member of the Maryland General Assembly named John Bateman became the first European owner of the tract of land. In ca. 1664, Captain Richard Perry "possessed" the land for Bateman's orphaned daughter at his death, and at some point Perry took ownership of the land. In 1672, Perry returned to England, leaving his land under the management of representatives. Also in 1672, Jacob Young bought a writ allowing him to establish a water mill on 10 acres of land at Perry Point. It is not clear if Young built his mill, which would have been the first settlement at the point. Philip Thomas purchased the 840 acre Perry lands in 1728. At his death, 570 acres was willed to his son Samuel. The Veterans Administration Medical Center is located on that acreage. Samuel Thomas may have been the first owner to live on the property (his father lived elsewhere). The brick manor house located on the property overlooks the Susquehanna River. It probably dates to the period of Samuel's ownership. Improvements to the land included 2 dwellings, a barn, outbuildings, 3 mills, a wharf, and an orchard. Only the locations of the extant manor house and one mill are known. At the time of his death in 1784, Samuel Thomas held 68 slaves. In 1798, Samuel's son Richard sold the plantation lands with the exception of 4 acres of Perry Point fronting the Susquehanna River and occupied by Mrs. Rogers. Richard Thomas apparently had an interest in a ferry service that ran from Perry Point to Havre de Grace across the Susquehanna.

In 1800, the land came under the ownership of John Stump. The Stump family retained the property for most of the 19th century, renting it to the United States Government from ca. 1861 until 1862 for use as a training station for horses and mules. The manor house served as headquarters for the officers and the government constructed several buildings on the property. In 1918, the government purchased the remnants of the 516 acre Perry Point plantation from the Stump heirs for the development of an ammonium nitrate plant. The company who constructed the facilities for the government management agency built railroads, streets, utilities, factory buildings, and more than 300 houses at the Perry Point site. In 1922, the Veterans Bureau acquired the facility for use as a hospital. The facility remains in use as a medical center but the extant manor house and mill create a link to the property's long history as a plantation and farm.

Site 18CE261 was investigated through the excavation of 9 STPs during Phase I and 74 STPs and 6 test units during Phase II. Three of the test units were placed near a small drainage located between 2 medical buildings and 3 test units were located where STPs produced diagnostic prehistoric materials. Excavation of the test units indicated that the site lacked integrity meaning that the artifacts were derived from disturbed contexts. Some units revealed a sequence of recent fill layers above sterile subsoil while others contained a deep plowzone layer above subsoil. In one case, the fill deposit was over 2 m deep and contained objects dated to the second half of the 20th century. No features were identified at the site. No information on the flotation sample processing was provided in the report.

In all, 107 prehistoric artifacts were reported in the Artifact Inventory, Appendix 2 in the site report. There were 99 pieces of debitage (73 quartz, 3 rhyolite, 1 Cecil County black chert and 14 other chert, 3 quartzite, 5 argillite). There were 8 chipped stone tools: 1 quartz staged preform, 2 scrapers (chert), 4 unidentified point fragments (1 quartz, 1 chert, 1 quartzite, 1 argillite), and 1 argillite Late Archaic Brewerton side-notched point.

A total of 220 historic artifacts were reported in the Artifact Inventory, Appendix 2 in the site report. The 3 activity items included 2 lead pencil fragments and 1 whetstone. Architectural items (n=69) included 9 brick fragments, 6 square nails, 10 wire nails, 21 unidentified nails, 8 pieces of window glass, 2 shards of flat

Phase II and Phase III Archaeological Database and Inventory

Description:

Archaic lithic short-term resource procurement

Unknown

glass, 4 mortar fragments, 1 ceramic tile fragment, 2 pieces of door hardware, 2 metal plates attached by a rivet, and 4 screen pieces. The single clothing item was a brass button. There were 74 kitchen-related items including 45 pieces of bottle glass, 26 ceramic sherds (4 whiteware, 2 pearlware, 2 creamware, 3 brown-glazed stoneware, 4 glazed and 8 unglazed redware, 3 porcelain), and 3 animal bone fragments. There were 72 miscellaneous objects (8 unidentified metal objects, 2 pieces of slate, 1 piece of foil, 61 terra cotta fragments possibly either activity related (eg. flower pot sherds) or kitchen related). The only arms-related item recovered was a Winchester 12 repeater shell base.

The Perry Point I-10 Site (18CE261) represents a Late Archaic period short-term base camp and a late 18th to early 20th century historic artifact scatter. The site is situated between two other sites (18CE260 and 18CE267) that contain both 19th century artifact scatters and prehistoric lithic scatters. Site 18CE267, located ca. 65 m to the east of site 18CE261, was identified as the site of a possible 19th century structure. Unfortunately, all of the artifacts from 18CE261 were recovered from construction-, fill-, or plow-disturbed contexts; therefore, the site lacks integrity. The Perry Point I-10 Site (18CE261) was determined not eligible for listing on the National Register of Historic Places.
