Historic Brief
Description:

possible Middle Woodland base camp, historic trash scatter

Unknown **External Samples/Data:**

Collection curated at MAC

 Additional raw data may be available online**Summary Description:**

Site 18GA120 was examined in the early 1980s as part of Kenneth C. Lacoste and Robert D. Wall's survey of prehistoric and historic sites in the Western Maryland Coal Region. The site is situated near a small creek which flows from the Casselman River northeast of Grantsville, MD. Soils were generally very shallow and rocky with most of the artifacts confined to the A horizon or plowzone. An unspecified number of test units, shovel tests, and surface survey yielded 1 projectile point (described as Middle Woodland), 1 drill, and 28 lithic flakes. In addition, 5 pieces of green plaster with black paint on them and 1 piece of glazed redware were also recovered. There is a discrepancy between the collections described on the 1980 site form and the Coal Region report. The site form notes only 1 chert flake, as well as the historic artifacts, while the report enumerates the artifacts described above in an appended table. This situation is further complicated by the fact that the report text states that Middle Woodland points (plural) were recovered. Later work at the site in the late 1980s yielded 1 projectile point, 1 drill tip, 1 utilized flake, 2 cores, and 37 additional flakes. It may be a Middle Woodland base camp.
