

Phase II and Phase III Archaeological Database and Inventory

Site Number: 18GA14A

Site Name: Poland Run East

Prehistoric

Other name(s)

Historic

Brief Description:

Late Archaic/Early Woodland short-term camp

Unknown

Site Location and Environmental Data:

Maryland Archaeological Research Unit No. 24

SCS soil & sediment code UnB

Latitude 39.4862

Longitude -79.2893

Physiographic province Allegheny Plateau

Terrestrial site

Underwater site

Elevation 750 m

Site slope 0-5%

Ethnobotany profile available

Maritime site

Site setting

-Site Setting restricted

-Lat/Long accurate to within 1 sq. mile, user may need to make slight adjustments in mapping to account for sites near state/county lines or streams

Topography

- Floodplain
- Hilltop/bluff
- Interior flat
- Upland flat
- Ridgetop
- Terrace
- Low terrace
- High terrace
- Rockshelter/cave
- Hillslope
- Unknown
- Other
- Lakeshore

Ownership

- Private
- Federal
- State of MD
- Regional/county/city
- Unknown

Site Name: Poland Run East

Prehistoric

Other name(s)

Historic

Brief Description:

Late Archaic/Early Woodland short-term camp

Unknown

External Samples/Data:

Collection curated at ?

Additional raw data may be available online

Summary Description:

Poland Run East was first identified in the 1950's by Frank Corliss of Swanton, Maryland. No professional work was performed at the site until 1988, when a land exchange by the Pennsylvania Electric Company became the impetus for Phase II Intensive Survey to relocate several sites on their property. The Phase II work was performed to 1) relocate the sites and determine site extent, and 2) provide information on the function, chronology, and seasonality of relocated sites. Poland Run East is identified as 18GA14 in the Phase II report, while the nearby Poland Run West site is identified as 18GA14.5. Current nomenclature is that Poland Run East is site 18GA14A and Poland Run West is 18GA14B.

The site was originally located at the margins of a swamp along the level valley floor of Deep Creek. The damming of the Creek and creation of Deep Creek Lake has had obvious impacts on the site.

A surface collection by Corliss was available at the time that the Phase II intensive research was undertaken. The collection from 18GA14A included 6 projectile points (1 fishtail, 2 stemmed, 1 side-notched, 1 large corner-notched, 1 fragment), 1 chert bifaces fragment, 2 chert chunks, 34 siltstone flakes, and 6 quartzite flakes. The points are described as roughly Late Archaic-Early Woodland in age.

The Phase II intensive survey successfully relocated site 18GA14A (but not 18GA14B) by intensive pedestrian survey combined with systematic shovel testing. The researchers started approximately 3 meters from the eastern most perimeter of the area and dug shovel tests across the site at regular intervals. Shovel tests were spaced every two meters in transects at a distance of 1 1/2 meters from each other. They were dug until soil changed composition at least twice or bedrock was encountered.

Only 3 black chert flakes were recovered from the site during Phase II work and the site was reportedly heavily disturbed.

Overall site size was reported to be approximately 1.3 m X 70 cm, but little else can be said about the site. The researchers concluded that 18GA14A was probably a Late Archaic/Early Woodland lithic scatter, but it had previously been interpreted as a possible base camp due to the material in the Corliss collection. However, due to the disturbed nature of the site and the paucity of recovered data, 18GA14A is unlikely to yield additional substantive data.
