## Summary Description:

Site 18GA292 was first located in 1981 as part of Robert D. Wall's survey of prehistoric sites in the Western Maryland Coal Region. The site is situated on a hilltop along Bear Creek upon soils categorized as channery loams. According to the property owner, who has collected at the site for years, there are several springs in the vicinity of the site. This site is probably closely related to 18GA293 which is on an adjacent hilltop. An unspecified number of test units placed at the site in 1981 yielded 2 projectile points, 2 bifaces, and 2 utilized/retouched flakes. The project report provides no details about the 2 projectile points that were recovered, but the property owner's collection includes many points diagnostic of the Early Archaic.

In 1987, Wall returned to 18GA292 to perform more extensive testing of the site. Twenty-two test units were placed at ten meter intervals and included eighteen 1 X 1 m units, two 2 X 2 m units, and two 1 X 2 m units. The larger units were placed in areas of previously demonstrated artifact concentration with the hope of finding features or undisturbed activity areas in B horizon soils. There are no clearly discernable activity areas on the site, however, the lithic debitage does cluster to a minor degree in a depressed area of the site. This is the area where the owner claims to have picked up the bulk of his collection of Early Archaic projectile points. The artifacts recovered during this project include 1 biface, 1 biface fragment, 2 biface edges, 1 drill, 1 point tip, and 575 flakes.

Ultimately, only faint evidence of a small activity area was noted (likely related to stone tool manufacture and maintenance), but not enough to formulate a clear interpretation of the events which took place on the site. It has been interpreted as a single-component, Early Archaic short-term camp.
