Summary Description:

Sang Run shelter (18GA75) was dug by test pit methods, but little is known about it. It is about 6.1 meters (20 feet) deep and the overhang is approximately 1.5 meters (five feet) high. Artifacts recovered include primarily triangular projectile points along with some pottery and well preserved bone refuse. No distinct features have been noted, however, a rich midden is believed to be present across the floor of the shelter.
