

# Phase II and Phase III Archaeological Database and Inventory

Site Number: 18HO273

Site Name: Curtis Farm 2

Prehistoric

Other name(s)

Historic

Unknown

Brief Description:

Prehistoric short-term resource procurement camp/lithic quarry

## Site Location and Environmental Data:

Maryland Archaeological Research Unit No. 14

SCS soil & sediment code

Latitude 39.2188

Longitude -76.7996

Physiographic province Eastern Piedmont

Terrestrial site

Underwater site

Elevation m

Site slope 3-8%

Ethnobotany profile available

Maritime site

Site setting

-Site Setting restricted

-Lat/Long accurate to within 1 sq. mile, user may need to make slight adjustments in mapping to account for sites near state/county lines or streams

### Topography

- Floodplain
- Hilltop/bluff
- Interior flat
- Upland flat
- Ridgetop
- Terrace
- Low terrace
- High terrace
- Rockshelter/cave
- Hillslope
- Unknown
- Other

### Ownership

- Private
- Federal
- State of MD
- Regional/county/city
- Unknown

### Nearest Surface Water

Name (if any) Deep Run

- | Saltwater                                |  | Freshwater                                       |                                |
|--|--|--|--------------------------------|
| Ocean <input type="checkbox"/>           | Estuary/tidal river <input type="checkbox"/> | Stream/river <input checked="" type="checkbox"/> | Swamp <input type="checkbox"/> |
| Tidewater/marsh <input type="checkbox"/> | Lake or pond <input type="checkbox"/>        | Spring <input type="checkbox"/>                  |                                |

Minimum distance to water is 45 m

## Temporal & Ethnic Contextual Data:

## Summary Description:

Curtis Farm 2 (18HO273) is a prehistoric quarry and lithic reduction camp east of the Columbia community and south of Ellicott City in Howard County. The site is situated within a former agricultural field, on a low terrace overlooking a tributary to Deep Run Creek. The site is separated from nearby 18HO272 (See synopsis report) by a shallow gully that cuts through the low terrace. This gully carries water eastward to the Deep Run tributary. Soils at the site are primarily loams of the Gladstone-Legore Complex.

The site was first recorded in August of 2004 during the course of a Phase I survey of the former Curtis Farm property. A Prince Georges County-based development company had recently acquired two parcels of the former farm property, totaling 58.6 acres of land. The company intended to develop the parcels into a new residential subdivision that would be known as "Shipley's Grant". A joint federal and state permit for building on non-tidal wetlands would be required for the proposed development. Thus, in accordance with the terms of Section 106 of the National Historic Preservation Act of 1966, and the Maryland Historical Trust Act of 1985, archeological survey of the parcels was required.

The Phase I survey consisted of the stratigraphic excavation of shovel test pits (STPs) at a 15 m interval, as well as non-systematic collection of surface finds over the development project area. In addition, supplemental radial shovel tests were excavated on a 5 m interval around positive finds. Two archeological sites were identified on the basis of horizontal and vertical concentration of small finds (mostly quartz lithics) that appeared to be part of primary deposition: Curtis Farm 1 (18HO272) and Curtis Farm 2 (18HO273). Both sites were provisionally identified as quarries or quarry reduction stations., which took advantage of the abundant beds of quartz gravel and the exposed underlying igneous and metamorphic rock in the streambeds.

All together, 54 artifacts were collected during Phase I operations at 18HO273. The assemblage consisted of 51 flaked stone objects (mostly quartz debitage), a fragment of brick, a lead musketball or piece of shot, and a piece of clay pigeon. Based on these findings, Phase II work was recommended, which was carried out in the spring of 2006.

Phase II work at 18HO273 consisted of the stratigraphic excavation by-hand of four test units (generally 1 X 1 m in size) at the site. This manner of investigation was utilized to attain greater control over site stratigraphy and to determine the degree of horizontal and vertical integrity of any manmade features that might be present.

The hand-excavation of test units was done primarily with trowels. It proceeded from one edge of the unit towards the opposite one, removing one shallow layer of material after another until the natural contours of the context could be discerned. Where soil layers proved particularly thick or intractable, flat shovels or adzes were similarly used to remove a few centimeters of soil at a time. All units were excavated to a depth of at least 20 cm into non-artifact-bearing, sterile subsoil. All soils were passed through hardware mesh and standardized forms were used to record contextual information.

Phase II efforts failed to identify any intact cultural features associated with the prehistoric occupation of the area.

A total of 53 artifacts were recovered during the Phase II excavations at 18HO273. Fifteen of the artifacts were charcoal fragments of uncertain age. These items are not included in the tables above. A total of 30 artifacts date to the pre-contact era and 19 date post-contact. A formal analysis and description of all of these materials is not provided in the body of the site report, but the discussion section of the report suggests that all or most of the materials are non-diagnostic flaked stone. They have been cataloged as such in the tables above. Historic artifacts from Phase II included 1 piece of stoneware, the only artifact recovered below the plowzone. The remaining post-contact materials are cataloged above as "miscellaneous" historic finds.

Phase II work at the site largely confirmed that 18HO273 was probably a prehistoric quarry or quarry reduction station of unknown prehistoric age. In addition, however, Phase II work also revealed that most of the recovered materials (primarily quartz debitage exhibiting a high percentage of primary flakes) were confined to the disturbed plowzone level. Phase II efforts also failed to identify any intact cultural features associated with the prehistoric occupation of the area. Site 18HO273 was determined not eligible for listing in the NRHP and no further investigations were carried out before construction of the new housing complex.
