Summary Description:

The Golden Eagle Landing site, 18SO94, is an apparent Late Woodland and possibly Contact period hamlet near Princess Anne in Somerset County, Maryland. The site is situated on a prominent knoll overlooking the shoreline of the Manokin River.

Very little is known about the site and no professional excavations have been conducted at 18SO94. It was discovered because artifacts were eroding out of the northwest section of the site and drew the attention of students from Washington High School who belonged to the Skipjack Club. Members of the club excavated a single test unit roughly 50 cm X 50 cm in size and excavated to a depth of approximately 30 cm. This single test encountered prehistoric pottery sherds intermingled with 19th century ceramics in the top few centimeters. However, below this, only prehistoric sherds were encountered and the excavation did not reach the bottom of cultural deposits.

Fortunately, the excavations were brought to the attention of an individual at Salisbury State College who examined the materials recovered by the students and reported the site to the Maryland Historical Trust. Artifacts recovered included 1 Levanna point, approximately 24 chert flakes, approximately 50 ceramic sherds (tentatively identified as Moyaone ware), and a possible lead trade bead. These materials would be consistent with a Late Woodland and possibly contact period date for the site.

No additional excavation has ever been conducted at the site and its current status is unknown. What little excavation has been conducted indicates that intact deposits may remain preserved beneath a shallow layer of soil disturbed in historic times. Additional research is warranted to determine if the site does indeed represent a Late Woodland hamlet.
