## Summary Description:

The Goose Point III site (18TA43) represents a Woodland period short-term resource procurement camp and shell midden. The site is located at Goose Point, on the north bank of the Choptank River in Talbot County, Maryland. Soils at the site are predominately Mattapex silt loam. The site is located approximately 500-600 m north along the coastline from a large Middle and Late Woodland period hamlet site (18TA24).

The site was first brought to the attention of Maryland Geological Society personnel in 1975 by a member of the Mid-Shore Chapter of the Archeology Society of Maryland (ASM). ASM members reported finding sherds and chopper-type tools at this site. Then, in 1986, the US Army Corps of Engineers conducted an investigation of 18TA24 to determine the site's eligibility for listing on the National Register of Historic Places. The site inspection was undertaken as part of the Corps permit compliance process for construction of new bulkheads, riprap, and grading for 441.96 m (1,450') of shoreline. A 30 meter reach of the Choptank River bank with an exposed shell midden was evaluated for eligibility to the National Register of Historic Places. Based on photos located in the 18TA43 Site File, at least 4 test units (looking to be about 1 m<sup>2</sup>) were excavated within the site boundaries. Records indicate that different size oyster shell was observed and different periods of occupation were indicated in the topsoil layers (possibly referring to a mixture of historic and prehistoric materials). Scattered prehistoric ceramic sherds and lithic debitage were identified (recorded as 10 ceramics and 10 lithics in the table above as a minimum estimate). The shell midden was encountered in Test Unit 4. Artifacts from the 1986 investigations are currently being stored at the MAC Lab (accession # 1989.007). No final report detailing the 1986 investigation was available at the Maryland Historical Trust but the above information was available on the site form.

The Goose Point III site (18TA43) represents a Woodland period short-term resource procurement camp and shell midden. The bank has been disturbed by earth moving activities and natural erosional processes. It was suggested that a large portion of the site remains intact inland under a knoll and is presently (as of 1986) under cultivation.
