Summary Description:

The Truitt Site (18WC99) is a historical burial site in Wicomico County, Maryland. The burial was situated on a sandy knoll that is currently being used as a sand pit mine. The human remains were first identified by the land owner as they were eroding out of the sand pit mine bank. The sand pit has apparently removed the center of the knoll, and thus the highest portion and the area most likely to have had more graves.

An 1877 atlas indicates that the site area was owned by J.P. Oliphant and that there were houses in the general vicinity of the site but no structures seem to have been located immediately in the site area.

A cranium fragment and other bones were found eroding from the sand pit wall by the landowner and his son. The police were called in and they collected the material but did little digging. Excavations by Maryland Historical Trust archeologists proceeded by digging into the bank face above a dark soil lens that contained bone. The grave shaft measured roughly 1.06 m (42 in) in depth below the surface by 1.35 m (53 in) in width. The bones were mostly contained to the dark lens. All soil was screened in order to recover all the bone. A total of 14 skeletal bones were recovered including 1 partial skull fragment (the front portion of the skull is deteriorated), 1 fragment of an upper jaw containing 3 teeth, 1 lower jaw bone containing 12 teeth, 2 ulna bones 20.3 cm (8 in) in length, 1 radial bone 17.78 cm (7 in) in length, 3 vertebrae, and 5 unidentified bone fragments. Coffin furniture-related items recovered include 2 threaded screws with brass decorative heads that were part of the coffin hardware, approximately 20 coffin nails, and fragments of coffin wood that were located at the base of the dark stain.

Brief examination of the skeletal remains from the Truitt Site (18WC99) indicates that this was the burial of a middle-aged Caucasian female. It is possible that other burials were once located in the area but may have been removed during sand pit mining. No further study is recommended for the site but future ground moving excavations should be monitored for other historic activity.
