Summary Description:

The Gray's Cove Ossuary (18WO158) is located on a tidal flat along Gray's Creek in Worcester County. It most probably dates to the Late Woodland period. In 1991 a work crew from the local electric company discovered the bones during backhoe trenching for utilities at a new housing development. The Maryland state police initially investigated the scene and the bones uncovered during the utilities work were sent to the state medical examiner.

Bones were uncovered at approximately 66-75 centimeters (26 inches) below the surface. The police dug to about 1.22 meters (4 feet). On the heels of the discovery, archeologists from the Maryland Historical Trust began systematic survey of the ossuary. A grid running N-S and E-W at 2 meter intervals radiating off the survey marker (datum) was established.

The goal of the archeologists was to define the edges of the burial pit. This was achieved by trowelling of the trench walls. Aside from this no other hand excavation was undertaken. Limited augering in the area around the ossuary indicated the ossuary measured approximately 3 meters in diameter. In addition to the limited hand excavation and the augering, surface examination of the surrounding area was done.

During the excavations by the Maryland state police a "tomahawk" was recovered. The artifact, a small (4.5 cm) polished celt, was found in backfill adjacent to the trench from which the ossuary was exposed. This was the only non-skeletal item found in direct association with the burial. A number of skeletal remains were found. There was one 5 cm skull fragment and several smaller pieces of bone, some of which appear to have been burned. The bones were in a tightly packed jumble. It was not possible to estimate the number of individuals present in the ossuary other than "multiple". During surface examination of the area around the ossuary a small Rappahannock ceramic sherd with fabric-impressed decoration was found.

A portion of the Gray's Cove Ossuary (18WO158) was damaged during backhoe trenching. No other utilities work was to be done in the immediate locale of the ossuary. After consultation with representatives of the Maryland Commission on Indian Affairs, it was decided that the bones would be reinterred in the trench as close as possible to their original resting place. The ossuary, therefore, remains at least partially intact and is likely under a residential yard now.
