

# Phase II and Phase III Project Cover Sheet

All information contained within the individual site database and inventory sheets is solely the work of the researchers and authors noted below. The data provided has been culled from the original site reports noted below and in many cases has been lifted directly from them with little or no editing. The database and inventory sheets are meant to serve as a synopsis of the report findings and a finding aid and are not intended to replace or republish the research of the authors noted below.

## REPORT INFORMATION:

1988 Petraglia, M.D.  
Phase I and II Archaeological Testing at Cabot Park, Anne Arundel County, Maryland.  
Submitted to Cabot, Cabot, and Forbes, Inc.  
Library ID No: 00000562      Catalog/Shelving ID: AN 87

Research Firm/Institution:

Engineering-Science, Inc.  
1133 Fifteenth St., NW  
Washington DC 20005

Sites examined:

18AN649

Project Details:

Phase I	<input checked="" type="checkbox"/>	<b>Project Justification:</b>
Phase II	<input checked="" type="checkbox"/>	This report provides the details of a combined Phase I/II project conducted in 1988 in the Marley Neck area of Anne Arundel County. The work was carried out because the 114.46 acre property was slated for development as an industrial subdivision. The proposed work would entail the construction of stormwater management ponds in an environmentally sensitive area, thus compliance with archeological regulations came into play. This report only deals with the survey and testing of 30 acres of the development parcel.
Phase III		

<b>Project Objectives:</b>
Phase I
-Locate and describe significant or potentially significant sites which exist on the property.
-Provide, if possible, a preliminary assessment of the significance of any recorded site in terms of National Register criteria.
-Evaluate the effects of proposed development to the property and provide recommendations as to the disposition of existing archeological resources.
Phase II
-Delimit horizontal and vertical extent of any existing site.
-Determine the degree of stratigraphic integrity present.
-Interpret cultural affiliations, chronological span, and, if possible, site function.
-Determine site significance within a local and regional framework to allow recommendations pertinent to eligibility for nomination to the National Register of Historic Places.
-Determine the need for additional archaeological investigations within the project area.

Research Potential:

In the area surveyed, no significant historic sites were found. One small prehistoric site was identified (18AN649), situated on a flat rise of land in the southern part of the survey area. The site was going to be affected by the proposed construction, but beyond the completed Phase II work, no further testing of the site was warranted. This is based on the small spatial distribution of the artifact scatter, the low density of finds, the lack of any features, and the absence of any diagnostic time markers. In short, the site is not capable of answering any research questions related to Maryland prehistory.

## REPORT INFORMATION:

1989 Petraglia, M.D. and J. Wingard  
Phase I and II Archaeological Testing at Cabot Park, Anne Arundel County, Maryland (Second Report).  
Submitted to Cabot, Cabot, and Forbes, Inc.  
Library ID No: 00000571      Catalog/Shelving ID: AN 95

Research Firm/Institution:

Engineering-Science, Inc.  
1133 Fifteenth St., NW  
Washington, DC 20005

Sites examined:

18AN650

Project Details:

Phase I	<input checked="" type="checkbox"/>	<b>Project Justification:</b> This report provides the details of a combined Phase I/II project conducted in 1988 in the Marley Neck area of Anne Arundel County. The work was carried out because the 114.46 acre property was slated for development as an industrial subdivision. The proposed work would entail the construction of stormwater management ponds in an environmentally sensitive area, thus compliance with archeological regulations came into play. This report only deals with the survey and testing of 85 acres of the development parcel.

--

**Research Potential:**

Site 18AN650 was going to be affected by the proposed construction, but beyond the completed Phase II work, no further testing of the site was warranted. This is based on the small spatial distribution of the artifact scatter, the low density of finds, the lack of any features, and the absence of any diagnostic time markers. In short, the site is not capable of answering any research questions related to Maryland prehistory.
