

Phase II and Phase III Project Cover Sheet

All information contained within the individual site database and inventory sheets is solely the work of the researchers and authors noted below. The data provided has been culled from the original site reports noted below and in many cases has been lifted directly from them with little or no editing. The database and inventory sheets are meant to serve as a synopsis of the report findings and a finding aid and are not intended to replace or republish the research of the authors noted below.

REPORT INFORMATION:

2008 Child, K.M., C. Heidenrich, and D. Grose
Additional Phase I Archeological Survey and Phase II Site Evaluations for the MD 295 Improvements, MD 100 to I-195, and Hanover Road from High Tech Drive to MD 170, Howard and Anne Arundel Counties, Maryland.
Submitted to the Maryland State Highway Administration
Library ID No: 95000549 Catalog/Shelving ID: HO 116

Project Details:

Phase I	<input checked="" type="checkbox"/>	Project Justification: This report describes the results of 2007 Phase I survey of three proposed storm water management pond locations and Phase II site evaluations for three sites (18HO33, 18AN400, and 18AN1348) in Anne Arundel and Howard Counties. These investigations were undertaken on behalf of the Maryland State Highway Administration (SHA), in anticipation of construction impacts associated with (then) proposed improvements to MD 295. The work was performed in accordance with state and Federal guidelines including Section 106 of the NHPA, executive Order 11593, the Archeological and Historical Preservation Act of 1974, the Archeological Resources Protection Act of 1979, Title 36 of the Code of Federal Regulations, parts 60-66 and 800 as appropriate, and the Maryland Historic Trust Act of 1985.
Phase II	<input checked="" type="checkbox"/>	
Phase III		

Project Objectives: -Identify surface and sub-surface cultural resources. -Assess the significance of identified resources applying the National Register Criteria for Evaluation. -Provide a preliminary determination of: (1) the nature, age, and function of each resource, (2) the horizontal and vertical boundaries of each resource, and (3) the integrity of each resource. -Define the proposed impacts to each resource and make management recommendations.
--

MAC Accession: 2010.051

Research Potential:

Phase II investigation of 18AN400 indicated that although the site produced a relatively large number of cultural materials, and contained a few features, it also has been subject to post-occupation disturbances. Most of these disturbances relate to the construction and occupation of the 20th century residence on-site. The site was determined to lack integrity and is no longer considered a significant archeological resource.

Site 18AN1348 had a relatively low density of artifacts spread over a large area. The type and pattern of artifact distribution suggests the site represents a short-term retooling site of Early Woodland date. The presence of bifaces, combined with a generally low average debitage weight and high percentage of non-cortical flake, strengthens this argument. While two horizontally discrete prehistoric artifact concentration were identified, no evidence was encountered for vertically intact living surfaces. In addition, no prehistoric cultural features were identified. The presence of a plowzone on a stable landform leaves little likelihood of preserved prehistoric features. The site does not appear to be a significant archeological resource.

Based on the limited findings, it was determined that 18HO33 lacked additional potential to answer research questions related to Maryland prehistory. The site should not be considered a significant archeological resource.

REPORT INFORMATION:

2018 Hill, P.J.
A phase I/II archeological investigation of the Hanover Road Assemblage: a 13-acre multi-parcel located at 1384 Hanover Road in Hanover, Anne Arundel County, Maryland.
Library ID No: 95003008 Catalog/Shelving ID: AN 699

Project Details:

Phase I	<input checked="" type="checkbox"/>	Project Justification:	Project Objectives:
Phase II	<input checked="" type="checkbox"/>	The subject property was scheduled for commercial development. In order to move forward with the development of the property, the Anne Arundel County Department of Planning and Zoning, Cultural Resource Division requested that the archeological investigation be completed.	The goal of the Phase I study was to re-locate Sites 18AN400 and 18AN516 known to exist on the property and identify any new archeological resources present within the study area. The objective of the Phase II investigation was to more intensively examine any of the sites thought to have research value and archeological significance to Anne Arundel County.
Phase III			

Research Potential:

The nineteenth-century blacksmith shop component was thought to have research value and archeological significance. No further archeological work, however, was warranted for the blacksmith shop component since an agreed upon level of fieldwork was established prior to its examination. In addition, it was thought that a sufficient level of excavation was completed in order to better understand this unique resource.
