

Phase II and Phase III Project Cover Sheet

All information contained within the individual site database and inventory sheets is solely the work of the researchers and authors noted below. The data provided has been culled from the original site reports noted below and in many cases has been lifted directly from them with little or no editing. The database and inventory sheets are meant to serve as a synopsis of the report findings and a finding aid and are not intended to replace or republish the research of the authors noted below.

REPORT INFORMATION:

2003 Gibb, J.G.
Phase II Archeological Site Examination at the Annie May Bowen House Site (18CV354),
Prince Frederick, Calvert County, Maryland.
Submitted to Marrick Properties

Research Firm/Institution:

Gibb Archaeological Consulting

Library ID No: 97001732 Catalog/Shelving ID: CV 92

Sites examined:

18CV354

NRHP Eligible: N

[Justification](#)

Project Details:

Phase I

Phase II

Phase III

Project Justification:

This report describes a 2002 Phase II project in Prince Frederick. At the time, Marrick Properties of Dunkirk was proposing commercial real estate development at the southwest corner of Stoakley Road and MD 2/4 on a derelict 100 acre tobacco farm. The US Army Corps of Engineers, by virtue of Section 106 of the NHPA and in consultation with the Maryland Historical Trust acting under the authority of Article 83B, Sections 5-617 and 5-618 of the Annotated Code of Maryland, conditioned Corps permit approval on the successful determination of the historical significance of the previously identified Annie May Bowen archeological site.

MAC Accession: 2003.014.001

Project Objectives:

- Examine the horizontal and vertical limits of the farm's houselot.
- Interpret the site's significance.
- Evaluate the site's integrity.

Research Potential:

Both the prehistoric and historic components at the Annie M. Bowen House Site lack the qualities necessary for it to be considered eligible for inclusion on the National Register of Historic Places. The likelihood of encountering intact, undisturbed archeological deposits at 18CV354 is very low. Based on these findings, approvals were granted for the development of the site and the site today appears to have been largely destroyed.
