

Phase II and Phase III Project Cover Sheet

All information contained within the individual site database and inventory sheets is solely the work of the researchers and authors noted below. The data provided has been culled from the original site reports noted below and in many cases has been lifted directly from them with little or no editing. The database and inventory sheets are meant to serve as a synopsis of the report findings and a finding aid and are not intended to replace or republish the research of the authors noted below.

Project Details:

	Project Justification:	Project Objectives:
Phase I		
Phase II <input checked="" type="checkbox"/>	This report presents the findings of a Phase II archeological evaluation of Site 18PR218, located within the (then) proposed Manning Overlook subdivision in Accokeek, Prince George's County. At the time of the report (2005), the property owner was planning to subdivide approximately 37 acres in two discontinuous parcels divided by Manning Road East for construction of residential units. As part of the subdivision review process, the Maryland National Capital Park and Planning Commission (M-NCPPC) requested that the developer contract professional archeologists to conduct Phase I survey prior to development of the property, which resulted in the re-identification of 18PR218. Upon receipt of the Phase I results, M-NCPPC requested a Phase II site evaluation.	-Gather enough archeological data to determine the temporal and/or cultural affiliation of the site. -Identify the nature of artifact concentrations or activity loci to determine the types of activities occurring at the site. -Evaluate the stratigraphic integrity of the site's cultural deposits.
Phase III		

Research Potential:

Site 18PR218 is a lithic resource procurement that also yielded evidence of tool-making activities and processing of food resources. However, based on the lack of intact features and a paucity of diagnostics, the research potential of the site is severely limited. No additional archeological investigations are recommended.
