

Phase II and Phase III Project Cover Sheet

All information contained within the individual site database and inventory sheets is solely the work of the researchers and authors noted below. The data provided has been culled from the original site reports noted below and in many cases has been lifted directly from them with little or no editing. The database and inventory sheets are meant to serve as a synopsis of the report findings and a finding aid and are not intended to replace or republish the research of the authors noted below.

REPORT INFORMATION:

1957 MacCord, H.A.
Archeology of the Anacostia Valley of Washington, D.C., and Maryland. Journal of the Washington Academy of Sciences 47(12):393-397.
Submitted to the Washington Academy of Sciences

Library ID No: 00006930 Catalog/Shelving ID: MD 111

Sites examined:

18PR126

Project Details:

Phase I

Project Justification:

Phase II

Site was located on land owned by the (then) National Capital Parks and which was suspected to be within the right-of-way for the proposed Anacostia Park and Highway System (modern MD 295 – Anacostia Freeway). Since destruction of the site was anticipated, the researcher was granted permission to excavate enough of the site to determine the cultural sequences.

Phase III

Project Objectives:

-Conduct sufficient salvage work at the site to determine the basic cultural sequences represented.

MAC Accession: 1976.012

Research Potential:

See below for remaining research questions at 18PR126.

REPORT INFORMATION:

1975 Hume, G.W.
Proposal for the Mitigation of Site 18PR126 (and Archaeological Assessment: 108" Anacostia Force Main and Proposal for Mitigation of Site 18PR126).
Submitted to the Washington Suburban Sanitary Commission

Library ID No: 00006556 Catalog/Shelving ID: PR 8

Research Firm/Institution:

The George Washington University
2121 I Street, NW
Washington, DC 20052

Sites examined:

18PR126

Project Details:

Phase I

Project Justification:

Phase II

At this time, the site was examined as part of the broader work conducted by the D.C. Consortium of Universities' Potomac Valley Archeological Project. Most of the site was situated within the construction limits for a proposed pumping station and stream improvements along a nearby creek.

Phase III

Project Objectives:

-Sample the area to be impacted by construction of the pumping station and associated improvements.

-Provide recommendations on how to mitigate impacts to the site.

Research Potential:

Plans were proposed for further mitigation of Site 18PR126, prior to the pumping station construction. Unfortunately, it is not known whether this mitigation work was ever conducted or if construction plans were altered to avoid the site. Thus, the research potential of 18PR126 is currently unknown. A site visit and possible preliminary work to assess whether or not any portions of the site remain intact are certainly warranted.
