

Phase II and Phase III Project Cover Sheet

All information contained within the individual site database and inventory sheets is solely the work of the researchers and authors noted below. The data provided has been culled from the original site reports noted below and in many cases has been lifted directly from them with little or no editing. The database and inventory sheets are meant to serve as a synopsis of the report findings and a finding aid and are not intended to replace or republish the research of the authors noted below.

REPORT INFORMATION:

1977 Gardner, W.M. and R.M. Stewart
A Cultural Resources Reconnaissance of Five Proposed Sewer Lines in the Potomac
Piedmont and Coastal Plain.
Submitted to the Washington Suburban Sanitary Commission

Library ID No: 00006121 Catalog/Shelving ID: MO 10A

Research Firm/Institution:

Catholic University - Dept. of Anthropology
620 Michigan Ave., NE
Washington, DC 20064

Sites examined:

18PR166 18PR172 Others

Project Details:

Phase I	<input checked="" type="checkbox"/>	Project Justification: This report represents the results of archival, field, and laboratory research of an archeological reconnaissance of sewer line and related construction in Prince George's and Montgomery counties. The examination covered the sewer-line right-of-ways (ROW) for 5 Maryland subdivisions. The sewage related construction might adversely affect prehistoric and historic archeological resources in the proposed subdivisions.
Phase II	<input type="checkbox"/>	
Phase III	<input type="checkbox"/>	

Project Objectives: -Conduct a walkover reconnaissance of the survey area. -Conduct preliminary subsurface investigations at any sites identified during the course of walkover reconnaissance. -Incorporate the data into regional predictive models.
--

Research Potential:

See below for remaining research questions at 18PR166.

See below for remaining research questions at 18PR172.

REPORT INFORMATION:

1978 Stewart, R.M. and W.M. Gardner
Phase II Archaeological Investigations near Sam Rice Manor, Montgomery County,
Maryland, and at 18PR166 and 18PR172 near Accokeek, Prince George's County, Maryland.
Submitted to the Washington Suburban Sanitary Commission

Library ID No: 00006122 Catalog/Shelving ID: MO 10B

Research Firm/Institution:

Catholic University - Dept. of Anthropology
620 Michigan Ave., NE
Washington, DC 20064

Sites examined:

18PR166 18PR172 Others

Project Details:

Phase I	<input type="checkbox"/>	Project Justification: This report represents the results of Phase II testing of two previously identified archeological sites in Prince George's County, Maryland. This work was related to sewer line and related construction in 5 new Maryland subdivisions. The sewage related construction might adversely affect both sites and, hence, Phase II testing was mandated by law.
Phase II	<input checked="" type="checkbox"/>	
Phase III	<input type="checkbox"/>	

Project Objectives: -Determine the boundaries of the noted prehistoric areas within the boundaries of the proposed sewer-line ROW through the excavation of test units. -Recover a large enough number of cultural materials and other pertinent data in order to significantly sample the site areas and more clearly establish the nature, function, and chronology of the sites involved. -Determine the nature and extent, if any, of the undisturbed (below plowzone) portions of the noted site areas.
--

Research Potential:

See below for remaining research questions at 18PR166.

A compact single component Late Woodland encampment was noted in the deposits of the western portion of Site 18PR172. This component, the only portion of the site likely of any significance, is believed to have been entirely excavated in 1978. Further examination of 18PR172 is unlikely to yield significant new information.

REPORT INFORMATION:

Research Firm/Institution:

2000 Gardner, W.M., et. al.
Phase Ib Intensive Archeological Identification Survey for the Widening of MD 210 [Indian Head Highway] and the Improvement of Nine Signalized Intersections, Extending from the Capital Beltway to MD 228, Prince George's County, Maryland.
Submitted to the Maryland State Highway Administration

Thunderbird Archeological Associates, Inc.
126 East High Street
Woodstock, VA 22664

Library ID No: 97000545 Catalog/Shelving ID: PR 258

Sites examined:

18PR166 18PR297 18PR590
NRHP Eligible: N NRHP Eligible: N

Project Details:

Phase I	<input checked="" type="checkbox"/>	Project Justification: A Phase Ib archeological identification survey was conducted in January of 2000 along the Area of Potential Effects (APE) for proposed highway widening along the existing alignment of MD 210, 13 ½ miles south from the Capital Beltway to MD 228. Ten acres along 6 intersections were chosen to be surveyed as they were felt to have good potential for archeological sites. Portions of two previously identified sites (18PR166 and 18PR297) that might be impacted by the project were also examined.
Phase II		
Phase III		

Project Objectives: -Identify archeological sites within previously unsurveyed portions of the project area that have high archeological potential. -Define site size and the boundaries of identified resources. -Evaluate the nature of identified resources in terms of their potential for integrity and possible eligibility for the NRHP.

Research Potential:

In the eastern portion of the Site 18PR166, intact sub-plowzone deposits were encountered along with an intact pit feature containing diagnostic Middle Woodland artifacts. Though a limited portion of these subsurface deposits was examined in the late 1970s, the intact soils likely extend into areas that could not be examined because they were outside of project right-of-way. Exploratory shovel testing in these areas should be conducted if an opportunity presents itself to better gauge the research potential of 18PR166.
