

# Phase II and Phase III Project Cover Sheet

All information contained within the individual site database and inventory sheets is solely the work of the researchers and authors noted below. The data provided has been culled from the original site reports noted below and in many cases has been lifted directly from them with little or no editing. The database and inventory sheets are meant to serve as a synopsis of the report findings and a finding aid and are not intended to replace or republish the research of the authors noted below.

## REPORT INFORMATION:

1988 Ervin, R.G.  
Archeological Survey of the U.S. Route 301/Maryland Route 213 Intersection, Queen Anne's County, Maryland.  
Submitted to the Maryland State Highway Administration  
Library ID No: 00000808 Catalog/Shelving ID: QU 12

## Research Firm/Institution:

Maryland Geological Survey  
2300 St. Paul Street  
Baltimore, MD 21218

## Sites examined:

18QU218  
NRHP Eligible:  N

## Project Details:

Phase I	<input checked="" type="checkbox"/>	<b>Project Justification:</b> Site 18QU218 was first identified in July 1987 during an archeological survey of the U.S. Route 301/Maryland Route 213 intersection.
Phase II	<input type="checkbox"/>	
Phase III	<input type="checkbox"/>	

<b>Project Objectives:</b> -Identify archeological resources located within the proposed construction right-of-way
---

## Research Potential:

See below for remaining research questions at 18QU218.

## REPORT INFORMATION:

1989 Ebright, C.A.  
Phase II Archeological Investigations at the Denbigh Farm Site, Queen Anne's County, Maryland.  
Submitted to the Maryland State Highway Administration  
Library ID No: 00000809 Catalog/Shelving ID: QU 13

## Research Firm/Institution:

Maryland Geological Survey  
2300 St. Paul Street  
Baltimore, MD 21218

## Sites examined:

18QU218  
NRHP Eligible:  N

## Project Details:

Phase I	<input type="checkbox"/>	<b>Project Justification:</b> Site 18QU218 was first identified in July 1987 during an archeological survey of the U.S. Route 301/Maryland Route 213 intersection. The presence of Early Woodland lithic materials and the historical materials suggested the possible presence of a functionally-diverse campsite and further investigation was recommended ahead of the proposed construction. Phase II archeological investigation of the site was carried out in November 1987.
Phase II	<input checked="" type="checkbox"/>	
Phase III	<input type="checkbox"/>	

<b>Project Objectives:</b> -Define the site boundaries -Determine the number and location of site components -Determine the cultural and temporal affiliation of the components -Assess the potential for intact subplowzone deposits -Determine the research potential and significance of the archeological resources
--

## Research Potential:

The Denbigh Farm Site (18QU218) is a multicomponent site with a possible Early Archaic and Woodland period lithic scatter representing a series of short-term base camps, and a late 19th to early 20th century artifact scatter. The range of artifact types in the prehistoric assemblage suggested food procurement and processing activities occurred in the site area. The prehistoric artifacts were entirely confined to the plowzone and thus lack integrity. The historic component has been heavily disturbed by past road modification. The site of the original structure, located just north of the project area, has been entirely destroyed. No further archeological work is recommended for the site.
